

Who can benefit from Berard AIT?

Check off items that describe current or previous history for child. If numerous items are checked, Berard AIT should be considered.

- Does not learn well through use of the auditory channel
- Has a history of ear infections
- Cannot always relate what is heard to what is seen
- Frequently misunderstands what is said
- Forgets what is said in a few minutes
- Daydreams - attention drifts- not with it at times
- Experiences problems with sound discrimination
- Notices sounds before others do
- Constant humming or audible self-talk
- Does not comprehend many words, not grasping verbal concepts appropriate for age/grade level
- Is considered to have autism, dyslexia, pervasive developmental disorder, central auditory processing disorder (CAPD), Asperger's Syndrome, or attention deficit hyperactivity disorder (ADHD)
- Does not pay attention (listen) to instruction 50% or more of the time
- Demonstrates below average performance in one or more academic area(s)
- Has difficulty following verbal directions - often necessary to repeat instructions
- Cannot attend to auditory stimuli for more than a few seconds
- Says "Huh?" and "What?": at least five or more times per day
- Has a short attention span
- Easily distracted by background noise
- Has "startle" response to sudden sound or movement
- Gives unusual descriptions of sounds, auditory stimulation, or sensation
- Needs frequent "quiet time" to regain mental energy and composure
- Has a language problem (morphology, syntax, vocabulary, phonology)
- Has an articulation (phonology) problem

10 Hours of Listening

Participants listen through headphones to modulated music from an AIT device for 20 sessions of 30 minutes each, for a total of 10 hours of listening therapy, completed over 10 (or 12) consecutive days.

Supervised AIT Sessions

AIT sessions are provided under expert supervision. A parent or caregiver should plan on remaining in the room during each 30 minute listening session. The minimum recommended age for AIT is 3 years of age.

Berard AIT

Berard AIT can help with:

- Expressive language
- Receptive language
- Writing
- Reading
- Spelling
- Attention
- Concentration
- Sensory integration
- Cognitive skills
- Confidence
- Dyslexia
- Other language, developmental, and behavioral disorders

What is Auditory Integration Training (AIT)

Auditory Integration Training (AIT) is a sound therapy that efficiently retrains a disorganized auditory system and improves hearing distortions and sound sensitivity.

Berard AIT is an educational intervention that was invented by Dr. Guy Berard. Auditory Integration Training is based on a scientific protocol with over 30 years of scientific research, including 28 clinical studies.
